

Podiatry

Podiatrists utilize Cerner's Ambulatory EHR for routine checkups, surgery treatments and completing everyday tasks quickly and accurately, adding more time and patients to their day. Document multiple complaints in one note, diagnose, order and prescribe from one location and more:

- Utilize podiatry-specific templates for a thoroughly documented patient chart in a clean, narrative format
- Upload digital photos directly into the note or take advantage of our large library of adam.com drawings including feet, toes, ankles, bones and ligaments
- Manage chronic conditions such as diabetes, and automatic reminders such as yearly foot exams with the Recommendations tool
- Accurately code the visit in seconds with nCode, a built in natural language processor that reads through your note picking up key terms

Key Benefits

- Gain a holistic view of the patient's chart on one screen
- Document using structured items, free text, voice or a hybrid of models
- Utilize Favorites folders to access commonly used meds, labs and diagnosis

"I'm able to see 45 to 50 patients a day. I walk away from my practice with all of my billing and charting done. I'm able to enjoy podiatry and not get caught up in the paperwork."

Leland Gilmore, DPM—Capital Podiatry Associates (Washington, DC)
